

# EDUCATION AND TRAINING

## *Installers and Contractors*

This one-hour course is tailored for contractors and installers working on housing developments who are tasked with bringing lighting designs to life. While the drawings might look straightforward, every column placement, mounting height, and tilt angle has been calculated for a reason. Yet all too often, fittings are installed wherever there's space or convenience, 3 metres from where specified, tilted upwards instead of level, or even positioned within tree canopies. These deviations, however small they seem, can compromise safety, ecological mitigation, visual comfort, and the chances of adoption by the local authority.

This session demystifies lighting layouts and explains why accuracy in installation is non-negotiable. We'll teach attendees how to interpret lighting drawings, understand design annotations, and recognise why following the plan exactly is crucial for compliance and performance. From glare control to uniformity, and spill lighting to ecology-sensitive siting, contractors will leave this session with a new appreciation of what good lighting design looks like, and why it matters.

***Get it right first time, learn how to install lighting the way it was meant to be.***

We offer webinars to anyone involved in installing lighting or who is a contractor looking to upskill their staff in the why, rather than just the how. Delivered either live, or through a downloadable link to watch when you choose.

Get in touch now, we can help your team elevate their service above that of your competitors. **Knowledge is power!**
